Description

A DNA sequence encoding the extracellular domain of human Osteoactivin/GPNMB (Ala24-Pro474) was fused with a poly histidine tag at the C-terminus. The secreted recombinant human Osteoactivin generated after removal of the signal peptide comprises 464 amino acids with a predicted molecular mass of 52.1 kDa. As a result of glycosylation, it migrates as an approximately 90 kDa band in SDS-PAGE under reducing conditions.

Formulation

Lyophilized 50 µg of human Osteoactivin in 50 µl of sterile PBS, Carry free.

Endotoxin

<0.1 EU per µg protein was determined by the LAL method.

Reconstitution & Storage

Add 50 µl deionized water to the vial to prepare a working stock solution at 1000 µg/mL .

Store lyophilized protein at -70 °C. Lyophilized protein is stable for up to 6 months from date of receipt at -70 °C

Sequence: Human Osteoactivin (Ala22-Pro474)
